Hull Identification Number

- The Hull Identification Number (HIN) is located on the starboard aft corner of the hull.
- Record the HIN (and the engine serial numbers) in the space provided above.
- Please refer to the HIN for any correspondence or orders.

Hazard Boxes & Symbols

The hazard boxes and symbols shown below are used throughout this supplement to call attention to potentially dangerous situations which could lead to either personal injury or product damage. Read all warnings carefully and follow all safety instructions.

⚠️ **DANGER!**
This box alerts you to immediate hazards which **WILL** cause severe personal injury or death if the warning is ignored.

⚠️ **WARNING!**
This box alerts you to hazards or unsafe practices which **COULD** result in severe personal injury or death if the warning is ignored.

⚠️ **CAUTION**
This box alerts you to hazards or unsafe practices which **COULD** result in minor personal injury or cause product or property damage if the warning is ignored.

**NOTICE**
This box calls attention to installation, operation or maintenance information, which is important to proper operation but is not hazard related.
Chapter 1: Welcome Aboard!

- This **Owner’s Manual** provides information about your yacht that is **not** covered in the **Cruiser & Yacht Owner’s Manual Supplement**.
- **Before** using your yacht, study this **Owner’s Manual**, the **Cruiser & Yacht Owner’s Manual Supplement**, and **all** engine and accessory literature carefully.
- Keep this **Owner’s Manual** and the **Cruiser & Yacht Owner’s Manual Supplement** on your yacht in a secure, yet readily available place.

### Dimensions & Tank Capacities

**Dealer Service**

- Your dealer is your key to service.
- Ask your dealer to explain **all** systems **before** taking delivery of your yacht.
- Contact your dealer if you have any questions or problems with your new yacht.
- If your dealer cannot help, call our customer service hotline: 360-403-2198 or send us a FAX: 360-403-1158.
- Buy replacement parts from any authorized Meridian dealer.

### Warranty Information

- Meridian offers a Limited Warranty on each new Meridian purchased through an authorized Meridian dealer.
- A copy of the Limited Warranty was included in your owner’s packet.
- If you did not get a copy of the Limited Warranty, please contact your Meridian dealer or call 360-403-2198 for a copy.

### Boating Experience

**CONTROL HAZARD!**

A qualified operator **MUST** be in control of your yacht at **ALL** times. Do **NOT** operate your yacht while under the influence of alcohol or drugs.

If this is your first yacht or if you are changing to a type of yacht you are not familiar with, for your own comfort and safety, get handling and operating experience **before** assuming command of your yacht.

Take one of the boating safety classes offered by the U.S. Power Squadrons or the U.S. Coast Guard Auxiliary. For more course information, including dates and locations of upcoming classes, contact the organizations directly:

- U.S. Power Squadrons: 1-888-FOR-USPS (1-888-367-8777) or on the Internet at: http://www.usps.org
- In Canada, for the CPS courses call 1-888-CPS-BOAT.
- U.S. Coast Guard Auxiliary: 1-800-368-5647 or on the Internet at: http://www.cgaux.org

Outside the United States, your Meridian dealer, national sailing federation, or local boat club can advise you of local sea schools or competent instructors.
Engine & Accessory Guidelines

NOTICE
When storing your yacht, please refer to your engine’s operation and maintenance manuals.

NOTICE
Certain modifications to your yacht WILL result in cancellation of your warranty protection. ALWAYS check with your dealer BEFORE making any modifications to your yacht.

- Your yacht’s engines and accessories were selected to provide optimum performance and service.
- Installing different engines or other accessories may cause unwanted handling characteristics.
- Should you choose to install different engines or accessories that will affect your yacht’s running trim, have an experienced marine technician perform a safety inspection and handling test before operating your yacht again.

Engine & Accessory Literature
- The engines and accessories installed on your yacht come with their own operation and maintenance manuals.
- Read these manuals before using the engines and accessories.
- Unless noted otherwise, all engine and accessory literature referred to in this Owner’s Manual is included in your owner’s packet.

Propellers

! CAUTION
ENGINE DAMAGE HAZARD!
The factory standard propellers may not be the best for your particular yacht and load conditions. Refer to the engine manual for engine RPM ratings. The engines should reach, but NOT exceed the full rated RPM when full-throttle is applied.
Immediately contact your local Meridian dealer if:
- The engines cannot reach the full rated RPM when full-throttle is applied, or;
- The engines exceed the full rated RPM when full-throttle is applied.

- Keep the propellers in good repair and at the correct pitch for your particular situation.
- A slightly bent or nicked propeller will adversely affect the performance of your yacht.
Qualified Maintenance

To maintain the integrity and safety of your yacht, allow *ONLY* qualified personnel to perform maintenance on, or change, in any way, the:

- Steering system
- Propulsion system
- Engine control system
- Fuel system
- Environmental control system
- Electrical system
- Navigational system

**WARNING!**

- Failure to maintain your yacht’s systems (listed in the warning above) as designed could violate the laws in your jurisdiction and could expose you and other people to the danger of bodily injury or accidental death.
- Follow the instructions in this *Owner’s Manual*, the *Cruiser & Yacht Owner’s Manual Supplement*, the engine owner’s manual, and *all* accessory literature.

Structural Limitations

The command bridge is designed to be lightweight for proper yacht balance. The load limit for the command bridge is 30 pounds per square foot, evenly distributed.
### Safety Standards

<table>
<thead>
<tr>
<th>DANGER!</th>
<th>FALLING and ROTATING PROPELLER HAZARD!</th>
</tr>
</thead>
<tbody>
<tr>
<td>NEVER allow anyone to ride on parts of your yacht NOT designed for such use.</td>
<td></td>
</tr>
<tr>
<td>Sitting on seat backs, lounging on the forward deck, bow riding, gunwale riding or occupying the transom platform while underway is especially hazardous and WILL cause personal injury or death.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>DANGER!</th>
<th>FALLING, ROTATING PROPELLER and CARBON MONOXIDE POISONING HAZARD!</th>
</tr>
</thead>
<tbody>
<tr>
<td>NEVER allow anyone to occupy, or hang from, the back deck or swim platform while the engines are running.</td>
<td></td>
</tr>
<tr>
<td>Teak surfing, dragging, or water skiing within 20 feet of a moving watercraft can be fatal.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>DANGER!</th>
<th>PERSONAL SAFETY HAZARD!</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALWAYS secure the anchor and other loose objects BEFORE getting underway.</td>
<td></td>

<tr>
<td>Lead from battery terminals and from other sources such as ballast or fishing sinkers</td>
<td></td>
</tr>
<tr>
<td>To Avoid Harm:</td>
<td></td>
</tr>
<tr>
<td>Keep away from engine, generator, and cooking fuel exhaust fumes.</td>
<td></td>
</tr>
<tr>
<td>Wash exposed skin thoroughly with soap and water after handling the substances above.</td>
<td></td>
</tr>
</tbody>
</table>

- Your yacht’s mechanical and electrical systems were designed to meet safety standards in effect at the time it was built.
- Some of these standards were mandated by law, and all of them were designed to insure your safety and the safety of other people, vessels and property.

Read this Owner’s Manual, the Cruiser & Yacht Owner’s Manual Supplement, and all accessory instructions for important safety standards and hazard information.
Special Care for Moored Yachts

- Whether moored in saltwater or freshwater, your yacht will collect marine growth on its hull bottom.
- This will detract from your yacht’s beauty, greatly affect its performance, and may damage the gel coat.
- There are two methods of slowing marine growth:
  1. Periodically haul your yacht out of the water and scrub the hull bottom with a bristle brush and a solution of soap and water.
  2. Occasionally re-paint the hull below the waterline with a good grade of anti-fouling paint.

**Sacrificial Anodes (Zincs)**

- Your yacht features sacrificial anodes (zincs) to protect underwater metal parts from excessive deterioration. Check the zincs regularly and replace them if they have deteriorated more than 70%.

  There are many factors that affect the rate at which the zincs deteriorate, including:
  - Water temperature
  - Salinity
  - Water pollution
  - Stray electrical current

Stray electrical current from your yacht, another boat, or the dock may cause complete deterioration of the zincs in just a few weeks. If there is rapid zinc deterioration, measure the electrolytic corrosion around your yacht with a corrosion test meter.
Yacht Lifting

**WARNING!**

**PERSONAL INJURY and/or PRODUCT or PROPERTY DAMAGE HAZARD!**
- Lifting slings can slip on the hull, which could cause serious injury or death.
- Reduce the risk of sling slippage by ALWAYS securing the lifting slings together BEFORE lifting.

**WARNING!**

**PERSONAL INJURY and/or PRODUCT or PROPERTY DAMAGE HAZARD!**
NEVER lift your yacht using the cleats.

**WARNING!**

**PERSONAL INJURY and/or PRODUCT or PROPERTY DAMAGE HAZARD!**
- Water in the bilge can shift and change the balance of the load.
- If water is present in the bilge, pump the water out of the bilge areas BEFORE lifting your yacht.

**CAUTION**

**PRODUCT or PROPERTY DAMAGE HAZARD!**
- When lifting any boat, ALWAYS use a spreader bar.
- The spreader bar MUST be equal to the width of the boat at each lifting point.

- *Always* follow the lift equipment’s instructions and requirements.
- When lifting your yacht, *always* position the lifting slings at the port and starboard lifting sling label positions, as shown in the illustration.
Carbon Monoxide (CO)

**CO Facts**
- CO poisoning causes a significant number of boating deaths each year.
- Called the "silent killer", CO is an extremely toxic, colorless, odorless and tasteless gas.
- CO can harm or even kill you inside or outside your yacht.
- CO can affect you whether you’re underway, moored, or anchored.
- CO symptoms are similar to seasickness or alcohol intoxication.
- CO can make you sick in seconds. In high enough concentrations, even a few breaths can be fatal.
- Breathing CO blocks the ability of your blood to carry oxygen.
- The effects are cumulative. Even low levels of exposure can result in injury or death.

**Factors that Increase the Effects of CO Poisoning**
- Age
- Smokers or people exposed to high concentrations of cigarette smoke
- Consumption of alcohol
- Lung disorders
- Heart problems
- Pregnancy
Where & How CO Can Accumulate

Stationary conditions that increase CO accumulations include:

A. Using engine, generator, or other fuel burning device when yacht is moored in a confined space.

B. Mooring too close to another boat that is using its engine, generator, or other fuel burning device.

To correct stationary situations A and/or B:

- **Close all** windows, portlights and hatches.
- **If possible,** move your yacht away from source of CO.

Running conditions that increase CO accumulations include:

C. Running yacht with trim angle of bow too high.

D. Running yacht without through ventilation (station wagon effect).

To correct running situations C and/or D:

- **Trim** bow down.
- **Open** windows and canvas.
- **When possible,** run yacht so that prevailing winds help dissipate exhaust.

How to Protect Yourself & Others From CO

- **Know** where and how CO may accumulate in and around your yacht (see above).
- **Always** maintain fresh air circulation throughout your yacht.
- Know where your engine and generator exhaust outlets are located and keep everyone away from these areas.
- **Never** sit on, or hang onto, the back deck or swim platform while the engines or generator are running.
- **Never** enter the areas under swim platforms where exhaust outlets are located.
- Although CO can be present without the smell of exhaust fumes, if exhaust fumes are detected on your yacht, take immediate action to dissipate these fumes.
- Treat symptoms of seasickness as possible CO poisoning. Get the person into fresh air immediately. Seek medical attention—unless you’re sure it’s not CO.
- Install and maintain CO monitors inside your yacht. NEVER ignore any alarm. Replace monitors as recommended by the monitor manufacturer.
- Follow the checklists provided on the next page.
- Get a Vessel Safety Check.

For information on how to get a free VESSEL SAFETY CHECK, visit www.vesselsafetycheck.org or contact your local U.S. Coast Guard Auxiliary or United States Power Squadrons®.
- U.S. Coast Guard Auxiliary: 1-800-368-5647 or on the Internet at: http://www.cgaux.org
- U.S. Power Squadrons: 1-888-FOR-USPS (1-888-367-8777) or on the Internet at: http://www.usps.org
**CO Checklists**

**Trip Checklist**
- Educate *all* passengers about the symptoms of CO poisoning and where CO may accumulate.
- When docked, or rafted with another boat, be aware of exhaust emissions from the other boats.
- Make sure you know where the exhaust outlets are located on your yacht.
- Confirm that water flows from the exhaust outlets when the engines and generator are started.
- Listen for any change in exhaust sound, which could mean an exhaust component failure.
- Test the operation of each CO monitor by pressing the test button.

**Monthly Checklist**
- Make sure *all* exhaust clamps are in place and secure.
- Look for exhaust leaking from exhaust system components. Signs include rust and/or black streaking, water leaks, or corroded or cracked fittings.
- Inspect rubber exhaust hoses for burned, cracked, or deteriorated sections. *All* rubber hoses should be pliable and free of kinks.

**Annual Checklist**

*Have a Qualified Marine Technician:*  
- Replace exhaust hoses if cracking, charring, or deterioration is found.
- Ensure that your engines and generators are properly tuned, and well maintained.
- Inspect each water pump impeller and the water pump housing. Replace if worn. Make sure cooling systems are in working condition.
- Inspect *all* metallic exhaust components for cracking, rusting, leaking, or loosening. Make sure they check the cylinder head gasket, exhaust manifold, water injection elbow, and the threaded adapter nipple between the manifold and the elbow.
- Clean, inspect, and confirm proper operation of the generator cooling water anti-siphon valve (if equipped).

**CO Monitors**

---

**DANGER!**

**CARBON MONOXIDE POISONING HAZARD!**

- The house battery switch **MUST** be in the *On* position for the CO monitors to work.
- If your yacht will be unattended for an extended period of time, turn *Off* the house battery switch or the CO monitors **WILL** drain the house battery.
- **IMMEDIATELY** turn the house battery switch back *On* when you reboard your yacht.

---

- *NEVER* disconnect the CO monitors.
- Read the manufacturer’s instructions for your CO monitors. If you did not get the manufacturer’s instructions, call (800) 383-0269 and they will be mailed to you.
More Information

For more information about how you can prevent carbon monoxide poisoning on recreational boats and other ways to boat more safely, contact:

- American Boat & Yacht Council, Inc. (ABYC)
  3069 Solomon’s Island Road
  Edgewater, MD 21037-1416
  www.abycinc.org
  410-956-1050

For information on how to get a free VESSEL SAFETY CHECK, visit www.vesselsafetycheck.org or contact your local U.S. Coast Guard Auxiliary or United States Power Squadrons®.

- U.S. Coast Guard Auxiliary: 1-800-368-5647 or on the Internet at: http://www.cgaux.org
- U.S. Power Squadrons: 1-888-FOR-USPS (1-888-367-8777) or on the Internet at: http://www.usps.org
**WARNINGS & WARNING LABELS**

---

**WARNING**

GASOLINE VAPORS CAN EXPLODE. BEFORE STARTING, OPERATE BLOWER 4 MINUTES. CHECK ENGINE COMPARTMENT BILGE FOR FUEL VAPORS. RUN BLOWER BELOW CRUISING SPEED.

---

**WARNING**

QUALIFIED OPERATOR TO BE IN CONTROL AT ALL TIMES. OPERATION BY AN UNQUALIFIED OPERATOR CAN CAUSE LOSS OF CONTROL. THIS MAY RESULT IN SEVERE INJURY, DEATH, OR PROPERTY DAMAGE. BOAT STABILITY AND HANDLING WILL CHANGE WITH WEIGHT DISTRIBUTION. READ OWNER’S MANUAL BEFORE USE.

---

**WARNING**

ENGINE COMPARTMENT HAS FREE FIRE EXTINGUISHER SYSTEM. BEFORE DISCHARGING FIRE EXTINGUISHER:

1. SHUT OFF ENGINES AND BLOWERS.
2. EVACUATE THE ENGINE COMPARTMENT TO AVOID ASPHYXIATION.
3. AFTER DISCHARGE, VENTILATE ENGINE COMPARTMENT BEFORE ENTERING.

---

**WARNING**

GASOLINE VAPORS CAN EXPLODE. BEFORE STARTING, OPERATE BLOWER 4 MINUTES. CHECK ENGINE COMPARTMENT BILGE FOR FUEL VAPORS. RUN BLOWER BELOW CRUISING SPEED.

---

**WARNING**

CARBON MONOXIDE (CO) CAN CAUSE BRAIN DAMAGE OR DEATH.

Engine and generator exhaust contains odorless and colorless carbon monoxide gas.

Signs of carbon monoxide poisoning include nausea, headache, dizziness, drowsiness, and loss of consciousness.

Get fresh air if anyone shows signs of carbon monoxide poisoning. See Owner’s Manual for information regarding carbon monoxide poisoning.

---

**NOTICE**

WASHDOWN PUMP SHOULD NOT BE LEFT RUNNING WITH SEACOCK CLOSED.

---

---
Carbon monoxide (CO) can cause brain damage or death. Engine and generator exhaust contains odorless and colorless carbon monoxide gas. Carbon monoxide will be around the back of the boat when engines or generators are running. Move to fresh air if you feel nausea, headache, dizziness, or drowsiness. NW-206-05
Chapter 2: Locations

Exterior Views

Hull Views

[Diagram of boat with labeled parts: Starboard Hullside, Port Hullside, Transom, Scupper Drains, Trim Tab, Rudder, Sacrificial Zinc Anode Plate, Stern Thruster (if equipped), Deck Drain, Portlights, Head Vent, Drain System Vent, Holding Tank Vent, Freshwater Tank Vent, Engine Exhaust, Generator Exhaust Thru-Hulls (if equipped).]
Chapter 2: Locations

Forward Deck View
Helm Station(s)

NOTE: TYPICAL HELM LAYOUT SHOWN. ACTUAL LAYOUTS MAY VARY DEPENDING ON ENGINE & ACCESSORY OPTIONS.
Component Locations

12-Volt DC Accessory Outlets (Up to 4 total):

• One is located at the upper helm.

• One is located at the lower helm, if equipped.

• One is located below the tv on the port side of the mid berth.
• One is located on the starboard aft wall panel in the v-berth.

12-Volt DC Circuit Breakers:
• The 12-volt DC push-to-reset circuit breakers are located at the helm.
• The 12-volt DC main circuit breaker switch and standby-load push-to-reset circuit breakers are located on the battery switch panel.
110-Volt AC & 12-Volt DC Master Panels: Located inside the salon cabinet above the tv.

Air Conditioner Seawater Intake Seacock (If Equipped): Located in the forward area of the engine room bilge.
Air Conditioners (2 total) (If Equipped):

- One is located in the aft storage locker under the v-berth mattress.

- One is located behind the command bridge dash.
**Batteries:**
- All batteries except the bow thruster battery are located in the lazarette.
- The bow thruster battery is located in the engine room, forward of the starboard engine.

**Battery Charger:**
Located on the forward wall in the lazarette.
Battery Management Panel (Battery Switches):
- Located in the engine room.
- Access by lifting up the command bridge stairs.

Bilge Pumps (4 total):
- The aft bilge pump is located in the aft bilge area of the lazarette.
- The mid aft bilge pump is located in the aft bilge area of the engine room.
- The mid forward bilge pump is located in the forward bilge area of the engine room.

- The forward bilge pump is located inside the aft hatch in the mid berth.

**City Water Inlet:** Located inside the outboard transom storage hatch.
CO Monitors (3 total):
- One is located above the hanging locker on the port side of the v-berth.
- One is located above the hanging locker in the mid berth.
- One is located on the ceiling in the starboard aft corner of the salon.
**Depth Finder Transducer:**
Located under the aft end of the starboard engine.

**Engine Cooling System Seawater Intake Seacocks:** Located in the engine room, forward of each engine.
**Engine Room:** Access by lifting either the command bridge stairs or the floor hatch in the salon.

**Freshwater Fill Deck Fittings:** Located on the aft end of the starboard deck trail.
**Freshwater Pump:** Located on top of the freshwater tank on the port side of the lazarette.

**Freshwater Pump Switch:** Located on the 110-volt AC master panel inside the salon cabinet above the tv.

**Freshwater Tanks:** One is located on each side of the lazarette.
Fuel Fill Deck Fittings:
Located on the port and starboard corners of the aft deck.

Fuel Shut-off Valves (Diesel Engines Only):
Located on the fuel tanks.

Fuel Tanks:
Located on each side of the engine room.

Generator (If Equipped):
Located in the lazarette.
Generator Seawater Intake Seacock (If Equipped): Located inside the lazarette floor hatch forward of the generator.

Generator Seawater Strainer (If Equipped): Located inside the lazarette floor hatch forward of the generator.

Heat Exchange Shut-off Valve (If Equipped): Located in the engine room, forward of the port engine.

Holding Tank: Located in the forward area of the engine room bilge.
**Holding Tank Monitor:** Located inside the salon cabinet above the tv.

**Holding Tank Pump-out Deck Fitting (marked WASTE):** Located on the port deck trail.

**Hydraulic Steering Fluid Fill:** Located on the steering column at the upper helm.
Lazarette: Access the lazarette through the cockpit floor hatch.

Macerator Underwater Discharge Seacock (If Equipped): Located in the forward area of the engine room bilge.

Propane Tank (If Equipped): Located under the command bridge sink.
**Seawater Washdown Faucet:** Located inside the inboard transom storage hatch.

**Seawater Washdown Intake Seacock:** Located in the forward bilge area of the engine room.

**Seawater Washdown Pump Switch:** Located on the 12-volt DC master panel inside the salon cabinet above the tv.
**Shore Power Inlet(s):** Located inside the outboard transom storage hatch.

**Spotlight:** Located on the forward deck.

**Spotlight Control Panel:** Located at the upper helm.
**Transom Shower:** Located inside the inboard transom storage hatch.

**Trim Tab Hydraulic Fluid Reservoir & Pump:** Located in the starboard aft corner of the lazarette.
Wall Vacuum Unit (If Equipped):
- Located in the mid berth.
- Access through the starboard wall hatch.

Water Heater:
- Located in the mid berth.
- Access through the starboard wall hatch.

Windlass Foot Controls: Located inside the anchor locker.
Chapter 3: Propulsion & Related Systems

Engines

Read the engine operation and maintenance manuals before starting or working on the engines.

Engine Cooling System

Refer to the engine operation manual for cooling system details.

- Open the seawater intake seacock for each engine before starting the engines.
- Keep the seacocks Open while the engines are running.
- Check the cooling system’s seawater strainers for leaks and debris every time you use your yacht.
- See the Seawater Systems section in Chapter 6 of this Owner’s Manual for instructions about cleaning the seawater strainers.
Exhaust System

**DANGER!**

**CARBON MONOXIDE POISONING HAZARD!**

Leaking engine and/or generator exhaust is a source of dangerous carbon monoxide gas (CO).

- Check *ALL* exhaust systems *BEFORE* each trip.
- Look for leaks in the exhaust systems of the engines and the generator.
- Look for discoloration, water leaks, carbon or stains around *ALL* joints.
- Make sure *ALL* of the exhaust clamps are in place and secured.
- Make sure the ventilation systems work and are *NOT* obstructed or restricted.
- To reduce the chance of CO entering the living spaces, fill any gaps around engine room plumbing, cableways, exhaust systems, doors, hatches, and access panels.
- Read the *Carbon Monoxide (CO)* section of *Chapter 1* in this *Owner’s Manual*.

**Always** consider the sea conditions *before* anchoring or shutting *Off* the engines.

- The exhaust system is designed to keep seawater out of the engines in most sea conditions.
- However, do *not* anchor the stern to sea or shut the engines *Off* if high seas might flood the exhaust system.
Bilge Blower Systems

**WARNING!**

**FIRE and EXPLOSION HAZARD!**

Fuel vapors can explode! BEFORE starting the engines:

1. Check the bilge areas for fuel vapors or leaking fuel. If you see leaking fuel or smell fuel vapors:
   a. Do NOT start the engines or generator, do NOT turn On any electrical devices, extinguish ALL cigarettes, cigars, and other sources of flame or ignition.
   b. Get everyone off your yacht.
   c. Get trained help to find and fix the problem.

2. Run the bilge blowers for at least four minutes prior to engine starting, generator starting, electrical system maintenance, or activation of electrical devices.

   • If you smell fuel vapors and the engines and/or generator are already running;
     a. Shut Off the engines and/or generator, and turn Off ALL electrical devices.
     b. Extinguish ALL cigarettes, cigars, and other sources of flame or ignition.
     c. Get trained help to find and fix the problem.
   • NEVER obstruct or change the bilge blower system.

- The bilge blowers remove explosive fumes from the bilge areas.
- Fresh air is drawn into the bilge areas through the vents.

**To make sure the bilge areas are properly ventilated:**

- **Always** run the bilge blowers for at least four minutes **before** starting the engines or the generator (if equipped).
- Use the "sniff test" to check the bilge areas for fuel vapors **before** starting the engines or the generator (if equipped).
- Continue to run the blowers until your yacht has reached cruising speed.
- **Always** run the blowers when operating your yacht below cruising speed.
Fuel System

**WARNING!**

*FIRE, EXPLOSION and OPEN FLAME HAZARD!*

- It is very important that the fuel system be inspected thoroughly the first time it is filled and at each subsequent filling.
- Read the fueling instructions in the engine operation manual and the *Cruiser & Yacht Owner’s Manual Supplement*.

**CAUTION**

Avoid the storage or handling of gear near the fuel lines, fittings and tank.

**CAUTION**

*SYSTEM DAMAGE HAZARD!*

Use of any methanol, gasohol, or alcohol based fuel additive **WILL** damage the fuel system.

**NOTICE**

- On diesel engine models, air in the diesel supply system can stop an engine or severely restrict performance.
- If you suspect air in the fuel lines, refer to your engine operation manual for detailed instructions on how to bleed the system.

**NOTICE**

Carefully read the fuel section of both the *Cruiser & Yacht Owner’s Manual Supplement* and the engine operation manual, paying special attention to the subject of fuel recommendations.
**Fuel Fills & Vents**
- Depending on engine type, the fuel fill deck fittings are marked either GAS or DIESEL.
- If you have problems filling either fuel tank, see if the fuel fill hose or fuel tank vent hose is kinked or collapsed.
- If there are no visible signs of a problem, contact your local dealer.

**Anti-siphon Valves (Gas Engines Only)**

**NOTICE**
- If an engine running problem is diagnosed as fuel starvation, check the anti-siphon valve.
- If the valve is stuck or clogged, *ONLY* change or replace it while the engine is *Off*.
- *NEVER* run either engine with its anti-siphon valve removed, except in an emergency.

- The anti-siphon valves are vital fuel system parts.
- If a fuel line ruptures, this valve will prevent the fuel from siphoning from the tank.
- The valves are located on the fuel tanks, where the fuel feed lines attach to the tanks.
- These valves are spring loaded and are opened by fuel pump vacuum.
**Electronic Fuel Shut-off Valves (Diesel Engines Only)**

- Your diesel engines are equipped with electronic fuel shut-off valves.
- When you start your engines, the electronic fuel shut-off valves open to allow fuel to the engines.
- When you turn off the engines, the electronic fuel shut-off valves close, stopping the fuel from going to the engines.
- If one of the electronic fuel shut-off valves malfunction, it has a manual override.
- Turn the manual override clockwise to open the electronic fuel shut-off valve.

**Gas Engine Fuel Filters**

- The fuel pickup tube located inside each fuel tank is equipped with a fine mesh screen filter.
- Also, when supplied by the engine manufacturer, a fuel filter is installed on each engine.
- Periodically replace the fuel filters to make sure they remain clean and free of debris.
- Talk to your selling dealer or local marina about fuel additives that help prevent fungus or other buildup in your fuel tanks.

**Fuel Filter/Water Separators (Diesel Engines Only)**

```
NOTICE
Refer to the fuel filter/water separator manual for important service instructions.
```
Fuel Transfer Pump (Diesel Engines Only) (If Equipped)

The fuel transfer pump can be used to transfer fuel to a nearly empty tank or to equalize the fuel level in each tank.

1. The house battery switch must be turned **On** for the fuel transfer pump to run.

2. **Before** transferring fuel, check the fuel gauges to make sure that fuel is not about to be transferred into a full (or nearly full) tank. For accuracy, check the fuel gauges when your yacht is **not** underway.

3. After checking the fuel levels, hold the fuel transfer switch **On** to the side you want to pump fuel to. **NOTE:** This switch must be **held On** throughout the entire fuel transfer process.

- If the fuel transfer pump does not run when you follow the steps above, check the pump’s breaker on the 12-volt DC push-to-reset circuit breaker panel (for the location of this panel, see the **Component Locations** section in Chapter 2 of this Owner’s Manual).

- If the pump is running, but you are having problems transferring fuel, see if the fuel transfer hose or fuel tank vent hose is kinked or collapsed. If there are no visible signs of a problem, contact your local dealer.

4. When the desired amount of fuel has been transferred, release the switch.
Oil Change System (If Equipped) (Diesel Engines Only)

- The oil change system makes it easier to drain and refill the engine and generator oil.
- Read the oil change system instructions for information on the use of this system.

Fire Suppression System (If Equipped)

- The fire suppression system is designed to extinguish engine room fires.
- Before using your yacht for the first time, read the fire suppression system’s instruction and maintenance manual and follow all warnings.
- The system will discharge automatically whenever direct heat from a fire is detected in the engine room.
- The system can be discharged manually by pulling the T-handle (labeled ‘FIRE’) at the helm.
- The system can only be discharged once.
- After the system is discharged it must be refilled and refurbished before it can be used again.
Shaft-Transmission Alignment

**SYSTEM DAMAGE HAZARD!**
- If you suspect a shaft-transmission alignment problem, have a qualified mechanic inspect the alignment as soon as possible.
- Continued use may lead to premature engine, transmission, shaft, shaft seal and/or hull damage!

Alignment between the engine transmission output shaft and the propeller is critical. The alignment was performed at the factory and was rechecked by the dealer after your yacht had been in the water for 48 hours.
- An alignment inspection should be performed by a marine mechanic as part of the routine maintenance program after the initial 30 hours of operation, then every 60 hours and whenever unusual noise or vibration is noticed.
- Shaft-transmission alignment should be performed by a marine mechanic since it requires moving the engine and prop shaft.
- To insure proper alignment after a haul out or dry storage, wait 48 hours after launching before final alignment adjustments by a marine mechanic are made.

**Shaft Log Packless Sealing System**

Read the PSS Shaft Seal Installation Instructions for maintenance and inspection details.
Chapter 4: Controls & Gauges

Steering

**Hydraulic Steering System**

- Your yacht features a hydraulic steering system.
- Check the fluid level in the hydraulic steering reservoir at each helm *every time* you use your yacht.
- Yacht steering is *not* self-centering.

Rudder Stuffing Gland

- The rudder stuffing gland is part of the assembly where the rudders emerge from the bottom of your yacht.
- The rudder stuffing gland should *not* leak any water.
- If a leak develops, it can usually be stopped by tightening the stuffing gland nuts *slightly*.
- Do *not* over tighten the stuffing gland nuts.
- If stuffing gland leakage becomes excessive, packing replacement can be performed as follows:
  1. Remove your yacht from the water.
  2. Loosen the stuffing gland nuts and back the stuffing gland from the sleeve.
  3. Remove the old packing.
  4. Wrap new packing around the shaft.
  5. Cut the rings with a razor blade at an angle approximately 30 degrees to the long axis of the shaft.
  6. Stagger the ends of each ring around the shaft and insure that the rings are at the bottom in the sleeve.
  7. Tighten the stuffing gland nuts until resistance is felt.
Autopilot (If Equipped)

**WARNING!**

- NEVER leave the helm while the autopilot system is On!
- A qualified operator MUST monitor the autopilot system at ALL times and keep a visual lookout for other marine traffic and other hazards.

**NOTICE**

The autopilot system is ONLY an aid to navigation. It's accuracy can be affected by:

- Equipment failure or defects
- Environmental conditions
- Improper handling or use

- **Before** using the autopilot system, read the autopilot instruction manual(s).
- The autopilot will aid you in maintaining the chosen course of your yacht.

Shift/Throttle Controls

**WARNING!**

**LOSS OF CONTROL HAZARD!**

Improper maintenance of shift/throttle hardware may cause a sudden loss of control!

Read all of the information about the shift/throttle controls in the shift/throttle controls’ manual, the engine operation manual, and the *Cruiser & Yacht Owner's Manual Supplement*.

**Engine Synchronization (If Equipped)**

Follow the instructions in the synchronization section of the shift/throttle controls’ manual.
Trim Tabs

- **Before** using the trim tabs, read the trim tabs’ owner’s manual.
- The trim tabs are controlled by two rocker switches at the helm.
- Check and refill the trim tab hydraulic fluid reservoir as directed in the trim tabs’ owner’s manual. For the location of the fluid reservoir, see the Component Locations section in Chapter 2 of this Owner’s Manual.

Dual Thruster System

- This system features bow and stern thrusters.
- The thrusters can be controlled from either helm.
- During docking, the thrusters can assist you in maneuvering your yacht in close quarters.
- Read the thruster’s user manual **before** using the thruster system for the first time.
- Follow all user precautions carefully.
Gauges

**Cleaning the Gauges**

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PRODUCT or PROPERTY DAMAGE HAZARD!</strong></td>
</tr>
<tr>
<td>• Use ONLY mild soap and water to clean the gauge lenses and bezels.</td>
</tr>
<tr>
<td>• Use of other cleaners, including common window cleaning solutions, may cause the lenses to crack.</td>
</tr>
<tr>
<td>• Lenses cracked in this manner will NOT be covered by our warranty.</td>
</tr>
</tbody>
</table>

**Gauge Fogging**

- Moisture may occasionally find its way into the gauges causing lens fogging.
- Turning **On** the gauge lights will help dry the lenses.
- Fogging will not harm the gauges.

**Radio Transmission Interference**

VHF or other radio transmissions may cause brief erratic readings on the tachometers. This will not damage these gauges or affect their accuracy when the radio is not transmitting.

**Twin Engine Readings**

It is normal for tachometers and other gauges to have slightly different readings between engines.

**Fuel Gauges**

It is normal for the pointers on your fuel gauges to bounce as fuel sloshes back and forth in the fuel tanks.
Chapter 5: Navigation & Communication Equipment

Read the manuals for all navigation & communication equipment before using these systems.

Compass

NOTICE
- Compass accuracy can be affected by many factors.
- Have a qualified technician calibrate your compass.
- Make sure the technician gives you a deviation card which shows the corrections to apply in navigational calculations.
- Keep a copy of the deviation card at each helm.

Depth Finder

WARNING!
- Do NOT use the depth finder as a navigational aid to prevent collision, grounding, yacht damage or personal injury.
- When your yacht is moving, submerged objects will NOT be seen until they are already under your yacht.
- Bottom depths may change too quickly to allow time for your yacht to react.
- If you suspect shallow water or submerged objects, run your yacht at very slow speeds.

VHF Radio
- Your yacht may include a VHF (Very High Frequency) radio.
- As permitted by the FCC (Federal Communications Commission), the VHF radio can be used to access weather reports, summon assistance, or contact other vessels.
- Contact the FCC for licensing, rules and regulations concerning VHF radio usage.
Radar (If Equipped)

**WARNING!**
- Radar is meant to help the navigator, NOT replace him/her.
- The operator is responsible for keeping a visual look-out for possible collision situations.
- No single navigation aid (including this radar) should be relied upon as the only method for navigating your yacht.

**NOTICE**
The radar system is ONLY an aid to navigation. It's accuracy can be affected by:
- Equipment failure or defects
- Environmental conditions
- Improper handling or use

- The marine radar system gives you a complete and accurate 360° radar view of other vessels, buoys, and landfall surrounding your vessel.
- To turn this system On, the bridge main breaker on the battery switch panel must be switched On. Then power up the radar/GPS chart plotter.

Global Positioning System (GPS) (If Equipped)

**WARNING!**
- The GPS system should NOT be relied upon as the ONLY aid to navigation.
- A qualified operator MUST monitor the GPS system at ALL times and keep a look-out for other marine traffic and possible collision situations.

**NOTICE**
The GPS system is only an aid to navigation. It's accuracy can be affected by:
- Equipment failure or defects
- Environmental conditions
- Improper handling or use

- GPS receivers provide reliable and accurate position data, anywhere in the world.
- To turn this system On, the bridge main breaker must be switched On, then power up the GPS chart plotter.
- If equipped with an autopilot, the autopilot switch on the dash must be turned On to power up the GPS sensor (see the Autopilot System in Chapter 4 of this Owner's Manual).
Chapter 6: Plumbing

Bilge Pumps

• Your yacht has several bilge pumps for pumping water out of the bilge.

• The autofloat switches, mounted next to the bilge pumps, will turn **On** the bilge pumps if bilge water rises above a preset level.

• You can also turn **On** the bilge pumps yourself using the switches at the helm.

• The bilge pumps are wired directly to the battery. Unless the battery is dead, the bilge pump system should work even when your boat is unattended.

**NOTICE**

Discharge of oil, oil waste or fuel into navigable waters is prohibited by law. Violators are subject to legal action by the local authorities.
**Bilge Pump Testing**

- The bilge pumps are vital to the safety of your yacht.
- Test the bilge pumps often to make sure they are working properly.

1. One at a time, turn **On** the bilge pump switches at the helm.
2. Make sure that water in the bilge is pumped overboard.

If there is water in the bilge and a pump motor is running, but **not** pumping, inspect the discharge hose for a kink or collapsed area.

If the discharge hose looks okay, check the bilge pump and strainer for clogging debris.

**Checking the bilge pump and strainer for clogging debris:**

1. With your thumb and forefinger, squeeze the holding tabs on each side of the strainer.
2. Lift out the bilge pump.
3. Check the pump and strainer and clear any debris.

**Reinstalling the bilge pump:**

1. Align the tabs on the strainer with the slots on the pump.
2. Press down firmly until the tabs click into place.
3. Make sure the bilge pump is locked into place.

---

**Autofloat Switches**

- Each automatic bilge pump features an autofloat switch.
- The autofloat switch turns the pump **On** when water rises above a preset level.
- Each autofloat switch is normally located next to the bilge pump it controls.
- The autofloat switches should be tested often.

**Autofloat switch testing:**

1. Twist either of the white plastic knobs one quarter turn to lift the float and turn **On** the bilge pump.
2. If the pump does not turn **On**, check the push-to-reset circuit breaker.
3. If the circuit breaker is good, but the switch still does not work, it may mean the switch is bad, or the battery is dead.
Seawater Systems

Seacocks

**WARNING!**

**FLOODING and SWAMPING HAZARD!**
- Close the seacock(s) when leaving your yacht unattended for any length of time.
- If a seacock is left open, a hose failure could flood the bilge, swamp the batteries and the engines, and even sink your yacht.

**CAUTION**

**SYSTEM DAMAGE HAZARD!**
- BEFORE using any system that has a seacock, make sure that the system’s seacock is **Open**.
- Inspect and lubricate all seacocks annually.

Thru-hull inlet or outlet fittings near or below the waterline feature seacock valves. You can close a seacock to stop water entry:
- If the hose connected to the seacock fails, or;
- To work on equipment served by the seacock.

Seacocks are used on your yacht in seawater intake or liquid-discharge systems including, but not limited to:
- Engines
- Generator (if equipped)
- Air conditioner (if equipped)
- Marine head

Before using any system with a seacock, make sure the seacock is **Open** and stays **Open** until the system is shut **Off**.

Seawater Strainers

**CAUTION**

**FLOODING HAZARD!**
- BEFORE taking apart a seawater strainer for cleaning or other maintenance, Close the seacock that sends seawater to that strainer.
- Failure to close the seacock before taking apart the seawater strainer may allow large amounts of water to flood the bilge, which could swamp the batteries and the engines, and even sink your yacht.
- Keep the seacock **Closed** until the seawater strainer is completely reassembled.

**SYSTEM DAMAGE HAZARD!**
- After putting the seawater strainer back together, make sure that the seacock valve is **Open** BEFORE using the component/system.

- Seawater strainers are used to filter incoming seawater in some seawater intake systems. NOTE: Not all seawater intake systems have seawater strainers.
- If equipped, the seawater strainer is located near the seawater intake system’s seacock.
- Check the strainers for leaks and/or debris **every time** you use your yacht.
- Refer to the seawater strainer instruction sheet for cleaning and maintenance information.
Seawater Washdown (If Equipped)

⚠️ WARNING!

FLOODING and SWAMPING HAZARD!
- NEVER leave your yacht unattended while the seawater washdown system is running.
- Any leak or break in this system may allow large amounts of water to flood the bilge, which could swamp the batteries and the engines, and even sink your yacht.
- Close the intake seacock when leaving your yacht unattended for any length of time.

⚠️ CAUTION

SYSTEM DAMAGE HAZARD!
BEFORE turning On the seawater washdown system, make sure the intake seacock is Open.

- Always make sure the seawater intake seacock is Open before turning the seawater washdown system On.
- This system can be pressurized by turning On the seawater washdown pump. For the location of the seawater washdown pump circuit breaker, see the Component Locations section in Chapter 2 of this Owner’s Manual.
Freshwater System

**WARNING!**

- **ONLY** use safe drinking (potable) water in your yacht’s freshwater system.
- **ONLY** use FDA approved "drinking water safe" hoses when filling the freshwater tank or connecting to city water.
- **NEVER** use a common garden hose for drinking water.

- Read the Freshwater System section in the Cruiser & Yacht Owner’s Manual Supplement.
- Your yacht is equipped with a pressure type (demand) freshwater (potable) system.
- Pressurize the freshwater system by either:
  a. turning **On** the freshwater pump switch (the battery switch must also be **On**) or;
  b. connecting to city water.
- For the locations of the freshwater pump switch and the city water inlet, see the Component Locations section in Chapter 2 of this Owner’s Manual.
- **Always** turn **Off** the city water supply on the dock before leaving your yacht unattended.
- Turn **Off** the freshwater pump switch when your yacht is not in use or when the freshwater tank is empty.
- Inspect and clean the freshwater filter often (located on the freshwater pump).
- If your yacht is to be left unattended for a long period of time, pump the freshwater tank dry to prevent stored water from becoming stagnant and distasteful.
- If the freshwater system needs to be disinfected, ask your dealer about the treatments available.

![Diagram of yacht plumbing system](image-url)
Transom Shower

- Read the manufacturer’s instructions before using the transom shower for the first time.
- To use the transom shower, your yacht must be connected to city water, or the freshwater pump switch must be turned On.

City Water Inlet

WARNING!

FLOODING and SWAMPING HAZARD!

- NEVER leave your yacht unattended while the freshwater system is pressurized by city water.
- Any leak or break in this system may allow large amounts of water to flood the bilge, which could swamp the batteries and the engines, and even sink your yacht.
- ALWAYS turn Off the city water supply on the dock before leaving your yacht unattended.

- Read the City Water Hookup portion of the Freshwater System section in the Cruiser & Yacht Owner’s Manual Supplement.
- The freshwater pump’s 12-volt DC breaker must be Off while the freshwater system is being pressurized by a city water supply.
**Freshwater System Winterization**

1. Turn **On** the freshwater pump switch.
2. **Open all** of the faucets and showers and let the freshwater system drain completely.
3. Turn **Off** the freshwater pump switch.

All remaining water **must** be removed from the water lines. There are two ways to remove the remaining water from the lines:
- Compressed Air
- Gravity Draining

**Compressed Air**

![Diagram of freshwater system]

**CAUTION**

**FRESHWATER SYSTEM DAMAGE HAZARD!**
- A faucet **MUST** be **Open** when compressed air is blown through the freshwater system.
- **NEVER** blow compressed air through the water system when **ALL** of the faucets are **Closed**.

You **must** have an air compressor with an air hose and an air nozzle.

1. Remove the water line from the outlet side of the freshwater pump (opposite side from filter).
2. **Open** the faucet that is furthest away from the freshwater pump.
3. Place the air nozzle against the end of the just removed water line and blow air through the system.
4. When the water stops coming out of the faucet, stop the air and **Close** the faucet.
5. One at a time, repeat this process on **all** of the faucets and showers.

**Gravity Draining**

1. **Open all** faucets and showers.
2. Remove the drain plug from the tee fitting on the line connecting the freshwater tanks.
3. When the water has stopped draining from the freshwater tanks and the water lines, replace the drain plug.
**Water Heater**

---

**WARNING!**

**SCALDING HAZARD!**
Water heated by the water heater can be hot enough to scald the skin.

---

**CAUTION**

**WATER HEATER DAMAGE HAZARD!**

- Do **NOT** turn *On* the water heater electrical circuit on the 110-volt AC master panel until the water heater tank is **COMPLETELY** filled with water.
- The tank is full if water flows from the tap when the hot water is turned *On* in the galley.
- Even brief water heater operation with a dry tank **WILL** damage the heating elements.
- Warranty replacements will **NOT** be made on elements damaged in this manner.
- Drain the water heater and turn the power *Off* when the chance of freezing exists (see winterizing instructions below).

---

**NOTICE**

If 110-volt AC power is being provided by shore power or generator power, but the water heater is not working:

- Make sure the water heater circuit breaker on the 110-volt AC master panel is switched *On*.
- If the circuit breaker is *On*, but the water heater is still not working, ask your dealer how to check the push-to-reset circuit breaker located on the water heater.

---

- Read the water heater instruction manual and heed the warnings above.
- The water heater is connected to the 110-volt AC power system.
- To heat the water, turn *On* the water heater breaker on the 110-volt AC master panel.

---

**Winterizing the Water Heater**

---

**NOTICE**

The freshwater system **MUST** be drained **BEFORE** winterizing the water heater (see the [Freshwater System Winterization Instructions](#) on the previous page).

1. Turn *Off* the water heater breaker.
2. Disconnect the hose (A) attached to the pressure relief valve (B).
3. If there is any water in this hose, drain it into the bilge or into a bucket.
4. **Open** the pressure relief valve (B).
5. **Open** the drain valve (C).
- Leave the pressure relief and drain valves **Open** until you fit out your yacht after storage.
Drain Systems

Deck Drains
- Water on the deck is drained overboard through the deck drains.
- Keep the deck drains free of debris.

Drainage System (If Equipped)
The sink drains, air conditioners, bilge pumps, and sump pump all drain into the drainage system.
**Sump Pump Drain System**
- The lower air conditioner system and showers drain into the sump pump box.
- The sump pump box has an autofloat switch.
- When the drain water rises to a preset level, the autofloat switch turns *On* the sump pump, and the drain water is pumped into the drainage system.

**Sump Box Cleaning**
Periodically clean the sump box, filter, and pump as follows:
1. Remove the cover screws (A) and the cover (B).
2. Remove any debris from the box and the filter.
3. Clean the sump pump as outlined in the *Bilge Pumps* section of this chapter.

**Sump System Winterization**
Drain the sump pump system in the winter months when not in use.
1. Disconnect and drain *all* lines to the unit.
2. Remove the screws from the mounting feet (C).
3. Turn the box upside down to remove the rest of the water.
4. Reinstall the screws in the mounting feet and reconnect the system.
Marine Head & Holding Tank

NOTICE
Check with local authorities for regulations regarding the legal use of marine head systems.

Vacuum Flush Head System

- Read the vacuum flush head’s operation and maintenance manual.
- The vacuum flush head system uses freshwater from the freshwater tank and a vacuum pump to flush waste from the toilet into the holding tank.
- The holding tank is plumbed to a fitting on the deck for dockside pump-out.
- To check the content level of the holding tank, look at the monitoring gauge. For the location of the holding tank monitoring gauge, see the Component Locations section in Chapter 2 of this Owner’s Manual.
- Empty the holding tank at every opportunity.

Winterizing the System

Read the marine head’s operation and maintenance manual for winterizing instructions.
Macerator (If Equipped)

To use the macerator to pump waste directly overboard (where regulations permit):

1. **Open** the underwater discharge valve.
2. Press both macerator switches at the same time to run the pump.
3. Stop running the macerator as soon as the holding tank is empty.
4. **Close** the underwater discharge valve when you are done pumping.

- For the locations of the underwater discharge valve and the macerator switches, see the Component Locations section in Chapter 2 of this Owner’s Manual.
Chapter 7: Deck Equipment

Cleats

**WARNING!**

PERSONAL INJURY and/or PRODUCT or PROPERTY DAMAGE HAZARD!

NEVER lift your yacht using the cleats.

Carefully read the section on towing in the *Cruiser & Yacht Owner’s Manual Supplement* before towing anything behind your yacht or having your yacht towed by another vessel.

Windlass

**DANGER!**

PERSONAL SAFETY HAZARD!

- ALWAYS secure the anchor and other loose objects *BEFORE* getting underway.
- The anchor, and other items that are not properly secured, can come loose when your yacht is moving and cause personal injury or death.

**CAUTION**

PRODUCT DAMAGE HAZARD!

Do *NOT* pull your yacht to the anchor using the windlass or continue to run the windlass if it has stalled or is overloaded.

- Read and follow the manufacturer’s instruction manual *before* using the anchor windlass for the first time.
- The windlass can be controlled from a switch at the helm or from the deck foot switches.
- Make sure that the windlass circuit breaker is turned *On* *before* using the anchor windlass.
- To raise the anchor, use engine power (*not* the windlass) to move your yacht to, and directly above, the anchor.
- Dislodge the anchor from the bottom by pulling it straight up with the windlass.
- Make sure the anchor is secured *before* getting underway.
Canvas & Vinyl Tops & Enclosures

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>PRODUCT or PROPERTY DAMAGE HAZARD!</td>
</tr>
<tr>
<td>Take down and securely stow ALL canvas &amp; vinyl BEFORE your yacht is transported by road.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>BEFORE cleaning and/or stowing your canvas or vinyl, read the sections later in this chapter, Canvas Care and Vinyl Care.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Two people are needed for most of the tasks listed in this section.</td>
</tr>
</tbody>
</table>

1. Insert the end eyes of the main bow (A) into the deck hinges and secure with the pins.
2. Pull the secondary bows (B) forward and insert the end eyes of the forward braces (C) into the deck hinges and secure with the pins.
3. Insert the end eye of the additional port forward brace (D) into the deck hinge and secure with the pin.
4. Insert the end eyes of the lower aft braces (E) and upper aft braces (F) into the deck hinges on the radar wing and secure with the pins.

- The jaw slides should not need to be adjusted.
- If you decide to adjust the jaw slide positions, get the correct measurements from your selling dealer.
Canvas Care (see also ‘Clear Vinyl Care’ on next page)

- After each use, especially in saltwater, rinse the canvas with cold freshwater.
- Before stowing, let the canvas air-dry completely.
- The canvas can be rolled or folded for stowage.

Cleaning the Canvas

CAUTION

NEVER use detergents when washing the canvas. Detergents can destroy the water repellency, and mildew/UV resistant finish of your canvas.

Regularly clean the canvas to prevent dirt, pollen, and etc. from embedding in the fabric. Generally, it is easiest to wash the canvas while it is installed on your yacht.

1. Use a soft-bristled brush to remove all dust and loose dirt.
2. Hose down the canvas with freshwater.
3. Gently wash the canvas with a solution of lukewarm water (no more than 100° F) and non-detergent soap, such as Lux or Ivory Flakes.
4. Rinse thoroughly to remove the soap.
5. Before stowing, let the canvas air-dry completely.

Stubborn Stains

CAUTION

- Soaking in bleach solutions may remove the waterproof finish of the fabric and may also decrease the life of the polyester thread used in the canvas.
- If necessary, a water repellent treatment should be reapplied to your canvas. Ask your dealer about the treatments available for your yacht’s canvas.

Some stubborn stains may resist normal washing and you can try the following methods. However, these methods may remove the waterproof finish of the fabric and may also decrease the life of the polyester thread used in the canvas. Reapply a water repellent treatment as necessary.

Method 1

1. Add 1/8 cup (2 oz.) of non-chlorine bleach to one gallon of water and mix thoroughly.
2. Thoroughly wet the canvas and then gently scrub the stained area with the weak bleach solution.
3. Rinse with cold water to remove all of the solution.

Method 2

1. Add 1/2 cup (4 oz.) of non-chlorine bleach and 1/2 cup (4 oz.) Ivory Flakes to one gallon of water and mix thoroughly.
2. Soak the canvas in this solution for about 20 minutes.
3. Rinse with cold water to remove all of the solution.
Clear Vinyl Care (If Equipped)

- After each use, especially in saltwater, rinse the clear vinyl with cold freshwater.
- Before stowing, the clear vinyl must be completely dry. Air-drying is best, but you can also carefully dry the vinyl with a chamois or soft cotton cloth.
- The clear vinyl can be rolled or laid out flat for stowage.
- Never fold or crease the clear vinyl parts as cracking will occur.

Cleaning Clear Vinyl

Regularly clean the clear vinyl to prevent dirt, pollen, and etc. from marring the surface. Generally, it is easiest to clean the clear vinyl while it is installed on your yacht.

1. Hose down the clear vinyl with freshwater.
2. Using a soft cotton cloth (paper towels are abrasive and should never be used on clear vinyl), gently wash the clear vinyl with soap and water.
3. Rinse thoroughly to remove the soap.
4. Before stowing, the clear vinyl must be completely dry. Air-drying is best, but you can also carefully dry the vinyl with a chamois or soft cotton cloth.
- Ask your dealer about products available to keep the clear vinyl polished and looking new.
Chapter 8: Appliances & Entertainment Systems

**NOTICE**
Always keep an approved ABC-type fire extinguisher in galley area.

All appliances and entertainment systems installed on your yacht come with their own manuals. These manuals contain detailed instructions and important safeguards. Read these manuals before using your yacht’s appliances and entertainment systems.

- Make sure the 110-volt AC breaker is turned **On** for the appliance or entertainment system you wish to use.

**Refrigerator**

The refrigerator runs on 12-volt DC power unless 110-volt AC power is being supplied by shore power or generator power and the refrigerator’s circuit breaker on the 110-volt AC master panel is **On**.

**110-Volt AC Electric Stove**

**WARNING!**

_BURN/SCALDING and/or FIRE HAZARD!_

- Read the stove’s instruction manual **BEFORE** using.
- **ALWAYS** keep an approved ABC-type fire extinguisher in galley area.
- Do **NOT** use the stove while underway.
- Any non-cooking devices on or near your stove during use are potential fire hazards!
- Do **NOT** touch burners, grates or nearby surfaces as they may be hot even when they are dark in color. Areas near burners and grates may become hot enough to cause burns.
- During and after use, do **NOT** touch or let clothing or other flammable material come in contact with heated units or areas near the units (burner tops, main frame sides and back, sea rails and pot holders) until they have had sufficient time to cool.
Propane Stove (If Equipped)

**DANGER!**

**CARBON MONOXIDE POISONING HAZARD!**

- The propane stove is a source of dangerous carbon monoxide gas (CO).
- **BEFORE** using the propane stove, Open doors and windows to make sure there is enough fresh air for ventilation.
- Read the Carbon Monoxide (CO) section of Chapter 1 in this Owner’s Manual.

**WARNING!**

- Open flame cooking appliances consume oxygen, which could cause asphyxiation or death.
- Maintain *Open* ventilation.

Audio & Visual Equipment

**NOTICE**

AM radio reception may be impaired anytime the engine is running.

**Dockside Television & Telephone Inlet**

Plug a dockside source into the TV/telephone inlet if you want to watch cable TV or use a telephone.
Chapter 9: Lights

Care & Maintenance

All of the lights installed on your yacht are of top quality, but you should be aware that failure may periodically occur for a variety of reasons:

1. There may be a blown fuse - replace the fuse.
2. The bulb may be burned out - carry spare bulbs for replacement.
3. A wire may be damaged or may have come loose - repair as required.
4. The bulb base may be corroded - clean the base and coat it with non-conductive electrical lubricant.

Interior & Exterior Lights

- The lights are powered by your yacht’s 12-volt DC system.
- The battery switch must be in the On position for the lights to work.

Navigation Lights

- Be conservative in the use of battery power.
- Prolonged use of cabin interior lights (overnight) WILL result in a drained battery.

Avoid the storage of gear where it would block navigation lights from view.

Running lights are legally required to show vessel direction and right-of-way at night.

Spotlight

Read the spotlight’s operating instructions before using the spotlight.
Chapter 10: Air Conditioning & Heating

Air Conditioner (If Equipped)

**DANGER!**

CARBON MONOXIDE POISONING HAZARD!

- Dangerous carbon monoxide gas (CO) can be brought into your yacht through the air conditioning system.
- Read the Carbon Monoxide (CO) section of Chapter 1 in this Owner’s Manual.

**CAUTION**

SYSTEM DAMAGE HAZARD!

The air conditioning system’s seawater intake seacock MUST be Opened BEFORE turning On the air conditioner and MUST stay Open during use.
• Read the air conditioner manual before using the air conditioning system.

• Before using the air conditioning system, make sure the breakers on the 110-volt AC master panel are turned On and that the system’s seawater intake seacock is Open.

• The seacock must remain Open while the air conditioner is in use.

• Check the seawater strainer for debris before each use of the air conditioning system.

• If the strainer needs to be cleaned out, follow the directions in the Seawater Systems section of Chapter 6 in this Owner’s Manual.
Heat Exchanger Cabin Heat (If Equipped)

Your yacht may feature a heat exchanger cabin heater. This heater runs directly off the port engine. Before using the heat exchanger cabin heater:

1. Read the manufacturer’s instruction manual.
2. Make sure the circulation loop shut-off valve is Open.
3. Turn On the circuit breaker for the heater fan.

- If the heat exchanger circulation loop is Open and the port engine is running, the heater will radiate heat even if the heater fan is turned Off.
- All circulation to the heater can be shut Off by Closing the circulation loop shut-off valve.

Electric Heaters (If Equipped)

Your yacht may feature electric cabin heaters. Operating instructions for this system can be found in the manufacturer’s instruction manual.

- Before using the electric heaters, make sure the breakers on the 110-volt AC master panel are turned On.
Chapter 11: Electrical Systems

**DANGER!**

**EXTREME FIRE, SHOCK and EXPLOSION HAZARD!**

- To minimize the risks of fire and explosion, **NEVER** install knife switches or other arcing devices in the fuel compartments.
- **NEVER** substitute automotive parts for marine parts. Marine electrical, ignition, and fuel system parts were designed and manufactured to comply with rules and regulations that minimize risks of fire and explosion.
- Do **NOT** change the electrical systems or relevant drawings.
- Allow **ONLY** qualified marine electricians to install batteries and/or perform electrical system maintenance.
- Make sure that all battery switches are turned **Off BEFORE** performing any work in the engine spaces.

**WARNING!**

**FIRE and EXPLOSION HAZARD!**

Fuel vapors can explode! **BEFORE** electrical system maintenance or activation of electrical devices:

1. Check the bilge areas for fuel vapors or leaking fuel. If you see leaking fuel or smell fuel vapors:
   a. Do **NOT** start the engines or generator, do **NOT** turn **On** any electrical devices, extinguish **ALL** cigarettes, cigars, and other sources of flame or ignition.
   b. Get everyone off your yacht.
   c. Get trained help to find and fix the problem.
2. Run the bilge blowers for at least four minutes prior to engine starting, electrical system maintenance, or activation of electrical devices.

**CAUTION**

**SHOCK and ELECTRICAL SYSTEM DAMAGE HAZARD!**

When the engines are running, **NEVER** turn **Off** the main battery switches or disconnect the battery cables. Doing either could cause damage to your yacht’s engines and/or electrical system components.

**NOTICE**

Electrical connections are prone to corrosion. To reduce corrosion-caused electrical problems:

- Keep **ALL** electrical connections clean.
- Apply a spray-on protectant that is designed to protect connections from corrosion.
12-Volt DC System

Batteries
- The batteries supply electricity for lights, 12-volt accessories, engine starting and, if equipped, generator starting.
- The Electrical section in Chapter 8 of the Cruiser & Yacht Owner’s Manual Supplement provides battery care and maintenance instructions.

Battery Switches

> CAUTION

**SHOCK and ELECTRICAL SYSTEM DAMAGE HAZARD!**

When the engines are running, **NEVER** turn Off the main battery switches or disconnect the battery cables. Doing either could cause damage to your yacht’s engines and/or electrical system components.

> NOTICE

Make sure your selling dealer fully explains how to use the battery switches.

- A separate battery switch is provided for each battery (or battery bank).
- Standby-loads, such as the automatic bilge pumps and the stereo memory, are not affected by the battery switches since they are wired directly to the batteries (see the Wiring Diagrams section of this chapter for more details).
- Turn the battery switches to the Off position whenever your yacht will be unoccupied for long periods of time.
**Emergency Battery Parallel Switch**

- If an engine will not start because of a dead battery, the battery parallel switch allows you to use the other batteries for engine starting.

- A battery parallel switch is provided on the battery management panel and at each helm (see illustrations on right).

- Emergency parallel switch instructions are provided on the, VSR Charging Module Information Sheet.
**Fuses & Circuit Breakers**

The fuses and circuit breakers for the engines and main accessory power are on the following panels (for the locations of these panels, see the *Component Locations* section in Chapter 2 of this Owner’s Manual):

- 12-volt DC main distribution panel.
- 12-volt DC push-to-reset circuit breaker panel.
- Battery management panel.

**NOTE:** Some equipment may have secondary fuse protection at the unit, behind the battery management panel, or at the batteries.

**12-Volt DC Accessory Outlets**

![CAUTION](image)

*Do NOT* use the 12-volt DC accessory outlet with a cigarette or cigar lighter. High temperatures may melt the outlet.

- The outlets can be used with any 12-volt device which draws 15-amps or less.
- Each 12-volt DC accessory outlet is protected by a 15-amp breaker on the 12-volt DC push-to-reset circuit breaker panel.
- For the locations of the 12-volt DC accessory outlets, see the *Component Locations* section of *Chapter 2* in this manual.

**Alternators**

The engine alternators will keep the batteries properly charged when running at cruising speeds.
Battery Charger

**CAUTION**

**ENGINE and ELECTRICAL SYSTEM DAMAGE HAZARD!**

*NEVER* run your yacht’s engines and the battery charger at the same time.

**CAUTION**

- The battery charging systems (alternator and battery charger) installed on your yacht are designed to charge conventional lead-acid batteries.
- *BEFORE* installing gel-cell or other new technology batteries, consult with the battery manufacturer about charging system requirements.

*Before* using the battery charger, read *all* instructions and warnings: (1) on the VSR Charging Module Information Sheet, (2) on the battery charger, (3) on the batteries, and (4) in the battery charger manual.

- The battery charger will automatically charge your yacht’s batteries when 110-volt AC power is being provided by shore power or generator power, *and* the battery charger circuit breaker on the 110-volt AC master panel is *On*.
- The battery switches can be in any position during charging.
- You may use DC powered electrical systems, such as the lights and stereo when charging the batteries, but there will be a corresponding drop in charger performance.
110-Volt AC System

**WARNING!**

**FIRE and ELECTRICAL SYSTEM DAMAGE HAZARD!**

If equipped with a generator, using both shore power and generator power at the same time **WILL** cause major electrical system damage and could start a fire!

- The power source lockouts on the 110-volt AC master panel prevent the use of shore power and generator power at the same time.
- **NEVER** bypass the power source lockouts.

---

**CAUTION**

**WATER HEATER DAMAGE HAZARD!**

- Do **NOT** turn **On** the water heater circuit breaker on the 110-volt AC master panel until the water heater tank is **COMPLETELY** filled with water.
- The tank is full if water flows from the tap when the hot water is turned **On** in the galley.
- Even brief water heater operation with a dry tank **WILL** damage the heating elements.
- Warranty replacements will **NOT** be made on elements damaged in this manner.

---

**NOTICE**

- Whether using shore power or generator power, using several 110-volt AC accessories at the same time can result in an overloaded circuit.
- You may have to turn **Off** one or more accessories to use another accessory.

---

- To gain a basic understanding of your yacht’s 110-volt AC system, read the handbook, *A Boater’s Guide To AC Electrical Systems*. If this handbook is not in your owner’s packet, call 360-403-2198 and the handbook will be mailed to you.
- The 110-volt AC system can be energized by shore power, or generator power (if equipped).
- The individual breakers on the 110-volt AC master panel **must** be turned **On** to supply power to the accessories you wish to use.
- The 110-volt AC master panel may contain circuit breakers for accessories that are not available for your yacht.
Shore Power

**DANGER!**

**FIRE, EXPLOSION and SHOCK HAZARD!**

- Use *ONLY* compatible shore power connectors and *NEVER* alter the connectors.
- Turn *Off ALL* breakers and switches on the 110-volt AC master panel *BEFORE* plugging in or unplugging the shore power cord.
- To prevent shock or injury from dropping a "hot" cord into the water:
  a. *ALWAYS* plug the shore power cord into the yacht inlet first, and then into the dockside outlet.
  b. When unplugging from shore power, *ALWAYS* unplug the shore power cord from the dockside outlet first.
- *NEVER* leave the shore power cord plugged into the dockside outlet *ONLY*.
- *ONLY* use shore power cords approved for marine use. *NEVER* use ordinary indoor or outdoor extension cords.

**WARNING!**

**SHOCK and ELECTRICAL SYSTEM DAMAGE HAZARD!**

- Monitor the polarity indicator lights *EVERY TIME* you connect to shore power.
- If a reversed polarity light turns on when you are connecting to shore power, do *NOT* turn on the main breaker switches.
- Instead, *IMMEDIATELY* unplug the shore power cord (*ALWAYS* from the dockside outlet first) and alert marina management.

**WARNING!**

**SHOCK and ELECTRICAL SYSTEM DAMAGE HAZARD!**

- *BEFORE* each use, check the shore power cord(s) for defects or damage.
- *NEVER* use damaged or faulty cords since the danger of fire and electrical shock exists.
- Do *NOT* pinch shore power cords in doors or hatches, or coil the shore power cord too tightly, since these situations can generate enough heat to result in a fire.
- If a shore power cord is dropped into the water, *COMPLETELY* dry the blades and contact slots *BEFORE* using.

**CAUTION**

**ELECTRICAL SYSTEM DAMAGE HAZARD!**

- *NEVER* connect to dockside power outside of North America unless you have purchased the international electrical conversion option.
- Using several 110-volt AC accessories at the same time can result in an overloaded circuit. You may have to turn *Off* one or more accessories to use another accessory.
- Use double insulated or three-wire protected electrical appliances whenever possible.
• Your yacht is equipped with two (2) 110-volt/30-amp shore power inlets or one (1) 220-volt/50-amp shore power inlet.
• The 110-volt/30-amp shore power inlets provide 110-volt/30-amp power to each shore power master breaker.
• The 220-volt/50-amp shore power inlet provides 110-volt/50-amp power to each shore power master breaker.
• Dual shore power inlets are labeled LINE 1 and LINE 2, which corresponds to the SHORE POWER 1 and SHORE POWER 2 master breakers on the 110-volt AC master panel.
• LINE 1 and LINE 2 are independent of each other except when the parallel switch is used.

Connecting to Shore Power

1. Review all hazard information at the beginning of this section, Shore Power.
2. Turn Off all breakers and switches on the 110-volt AC master panel.
3. Attach the shore power cord(s) to the yacht inlet(s) first, then to the dockside outlet(s).
4. Switch the SHORE POWER 1 and/or SHORE POWER 2 master breakers On.
5. As needed, turn On the individual component breakers on the 110-volt AC master panel.

Shore Power Cable Hoist (If Equipped)
• The shore power cable hoist allows you to easily feed out and reel in the shore power cable.
• Before using the shore power cable hoist, read the cable hoist manual.
Parallel Switch (If Equipped with Dual Shore Power)

NOTICE
- When using the parallel switch do NOT exceed 30 total amps.
- The amperage of each component breaker is shown on the breaker itself.
- The voltage on each line can be read on the voltmeter on the 110-volt AC master panel.

When only one dockside outlet is available, you can use the parallel switch to provide power to both lines.

1. Connect to shore power as described in the Connecting to Shore Power section on the previous page.
2. Switch the parallel switch (transfers power from line 1 to line 2) On instead of the “SHORE POWER 2” master breaker.
3. Turn On the individual component breakers as required.

Generator

DANGER!
CARBON MONOXIDE POISONING HAZARD!
- Generators are a source of dangerous carbon monoxide gas (CO). Check the generator exhaust system for leaks BEFORE each use.
- Read the Carbon Monoxide (CO) section of Chapter 1 in this Owner’s Manual.

WARNING!
FIRE and EXPLOSION HAZARD!
Fuel vapors can explode! BEFORE starting the generator:
1. Check the bilge areas for fuel vapors or leaking fuel. If you see leaking fuel or smell fuel vapors:
   a. Do NOT start the generator or the engines, do NOT turn On any electrical devices, and extinguish ALL cigarettes, cigars, and other sources of flame or ignition.
   b. Get everyone off your yacht.
   c. Get trained help to find and fix the problem.
2. Run the bilge blowers for at least four minutes prior to generator or engine starting, electrical system maintenance, or activation of electrical devices.
   • If you smell fuel vapors and the generator is already running:
     a. Shut Off the generator and turn Off ALL electrical devices.
     b. Extinguish ALL cigarettes, cigars, and other sources of flame or ignition.
     c. Get trained help to find and fix the problem.

CAUTION
SYSTEM DAMAGE HAZARD!
- ALWAYS make sure the generator’s seawater intake seacock is Open BEFORE starting, and during running of the generator.
- NEVER run the generator starter for more than 30 seconds. If the generator does not start, wait at least 30 seconds BEFORE trying again.
- After the generator starts, let the generator stabilize BEFORE turning On the component breakers on the 110-volt AC master panel.
• When your yacht is not connected to shore power, the generator can supply 110-volt/60-hertz power.

• **Before** using the generator, read the generator operation manual for pre-start checks and break-in procedures.

• Refer to the generator manual for starting/stop-ping instructions.

• **Before** running the generator, open the exhaust thru-hull seacock to properly ventilate the exhaust.

**Important generator notes:**

• Polarity has been established in the installation of the generator. Therefore the polarity lights will **not** function in this mode.

• Fuel to run the main generator is supplied from the port fuel tank.

• Periodically replace the filter on the generator to make sure it remains clean and free of debris.

• Diesel generators also have a fuel filter/water separator. Service instructions are provided on the fuel filter/water separator.

• The coolant mixture installed at the factory consists of equal parts of water and antifreeze (Ethylene Glycol).

• Check the generator’s seawater strainer for leaks and/or debris **before** each use.
